[Company]

Dubai, UAE

Re: [Role] — Application

Hi [Hiring Manager Name],

Two production platforms shipped solo in four months — that's the headline. Below is what's behind it.

I'm an AI Engineer based in Dubai. Since February 2026, I've been the only engineer at Wall Street Jr Investments, building two full platforms from scratch using agentic AI tooling (Claude Code, Google Antigravity):

- **TopStocx** (topstocx.com) — algorithmic trading platform on Next.js + Vite + Supabase + Vercel, with TradingView Advanced Charts wired to the Leverate broker API for live market data, a `/chart` Supercharts page backed by Postgres + Row-Level Security, and an AI trading assistant on Claude API.
- **Wall Street Jr. Academy** (wsjrschool.com) — multi-school education platform launching now: Next.js 14 App Router, Supabase Auth, Stripe + Mux video hosting, cohort-based course structure, four schools (Finance, AI, Design, Business).

Around those, I've shipped the infrastructure that operates them:

- A custom Python **Model Context Protocol (MCP) server** that gives Claude direct access to Meta Ads + GA4 data, with a scheduled weekly + monthly auto-PDF reporting pipeline that emails performance digests to leadership.
- A stateful **n8n Instagram DM automation** that captures and qualifies leads through a multi-turn conversation, then ships them to Google Sheets + Slack.
- The Meta + Google Ads funnels that have delivered **30%+ organic visibility growth, 2x ad engagement, 70% faster lead response**, and **60% reduction** in manual sales operations.

What I bring to [Company]: a rare combination of AI-native engineering and performance-marketing execution. I orchestrate agentic AI tools to ship at the velocity of a small team — exactly what the next generation of AI engineering looks like, and I've already done it twice in production.

I'd love a short conversation about what you're building and where I can contribute.

Best,

Shinas AR
